REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 1-20, wherein a rotating mechanism comprises a housing with a curved inner wall surface, a first positioning portion and a limiting member; a first rotating member with a second positioning portion, a second rotating member, a restricting member abutting the limiting member, and a resilient element connected to the housing and first rotating member, wherein the first rotating member rotates within a predetermined angle by means of the resilient element, the first positioning portion and the second positioning portion, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following references are cited for disclosing an rotation mechanism having a housing or barrel with a curved surface and resilient and/or restricting member, but these references do not disclose a rotating mechanism comprises a housing with a curved inner wall surface, a first positioning portion and a limiting member; a first rotating member with a second positioning

portion, a second rotating member, a restricting member abutting the limiting member, and a resilient element connected to the housing and first rotating member, wherein the first rotating member rotates within a predetermined angle by means of the resilient element, the first positioning portion and the second positioning portion, as claimed: Horning et al. (5285322), Wallace et al. (6295170), Bell et al. (6519101), Hayashi (20040099495) and Kim et al. (20040141287).
